

Spotlight

Hytrol's LD Pusher is a light duty pusher designed to easily mount to the side of many conveyor models. The LD Pusher provides an economical solution for pushing light-weight products off at a right angle to product flow.

APPLICATION

There are numerous applications for the LD Pusher. An LD Pusher can provide the right solution for virtually any area where small or lightweight cartons need to be periodically pushed to a take-away line or container.

Application examples for the LD Pusher include packaging applications where "out-of-spec" cartons need to be pushed to a reject line, or quality inspection areas where items need to be periodically removed for inspection, etc.
